San Jose Federated City Employees' Retirement System

Asset Allocation Analysis

Introduction

- → This document reviews updated capital market expectations, evaluates the current asset allocation policy, and presents alternative asset allocation options for the Retirement System.
- → When we last considered changes to asset allocation one year ago, the market environment was characterized by historically high equity valuations, but interest rates were much lower than current levels. Given the much higher interest rates and lower asset class valuations at this time, expectations for asset class returns have increased significantly. Meketa Investment Group expects that the Retirement System's long-term (20-year) expected return remains well above the actuarial assumed rate of return of 6.625%, and the standard deviation, as calculated by risk advisor Verus, remains near the 12% threshold defined as the upper limit in the Retirement System's Investment Policy Statement.
- → The asset allocation review process highlights the natural tension between long term goals and short term risks, and should allow the System's decision-makers to make more informed decisions regarding portfolio positioning. Meketa Investment Group first worked with San Jose Staff to develop and analyze a wide variety of potential alternative asset allocation policies. This document provides two alternative asset allocation options, along with a 60% global equity/40% bond allocation, for your information.
- → Throughout the following slides, we provide various approaches to assessing risk in order to provide a "mosaic" of the risks faced by the System, including mean-variance analysis using Meketa's capital markets expectations, historical scenario analysis, and forward-looking stress testing and Economic Regime Management[®] analysis. The goal of this review is not to declare one portfolio the "right" choice or the only prudent choice, but to highlight the risk and return tradeoffs of different policy portfolios.

Asset Allocation Analysis

San Jose Federated Investment Policy Statement Asset Allocation Policy

 \rightarrow According to the Retirement System's Investment Policy Statement:

"The Board recognizes that establishing an appropriate strategic asset allocation ("SAA") portfolio is critical to the long-term success of the investment program, as asset allocation is the single biggest determinant of the expected risk and return of the System."

 \rightarrow The IPS also includes the following process:

"The (asset allocation) will be re-evaluated annually following the results of the annual actuarial study. (It) shall be established and modified based on the results of formal asset allocation studies performed approximately every three years or when a significant market correction occurs. The capital market assumptions (CMAs) used in such studies shall be reviewed and updated annually or when the S&P 500 experiences a decrease of more than 20% from peak. The Board shall consult with the general investment consultant in connection with such asset allocation studies and CMA reviews."

Asset Allocation Analysis

Meketa's Capital Market Expectations

 \rightarrow We update our capital markets expectations each year in January.

- Changes are driven by many factors, including interest rates, credit spreads, cap rates, and equity prices.
- → 2022 was a difficult year, with losses experienced for most asset classes, as interest rates increased, spreads widened, and most risk assets declined in value.
 - However, there is a notable silver lining to this story increased return assumptions.
- \rightarrow Bond yields increased by the largest amount since the 1990s, driving up future returns for fixed income assets.
- → Despite lower growth projections globally, the price decline experienced by equities and many other risk assets has improved their forward-looking returns.
- \rightarrow The net result is the largest increase in return assumptions in our 20+ year history of creating capital market expectations (CMEs).
- → While our 10-year CMEs continue to be lower than many of our 20-year CMEs, this is no longer true across the board, especially in fixed income.

Asset Allocation Analysis

Rising Interest Rates

- \rightarrow The US Treasury yield curve moved upward and flattened during 2022, even inverting in some portions of the curve.
- \rightarrow The increase was particularly sharp for short-term rates, driven by the Federal Reserve's actions that were intended to battle inflation.

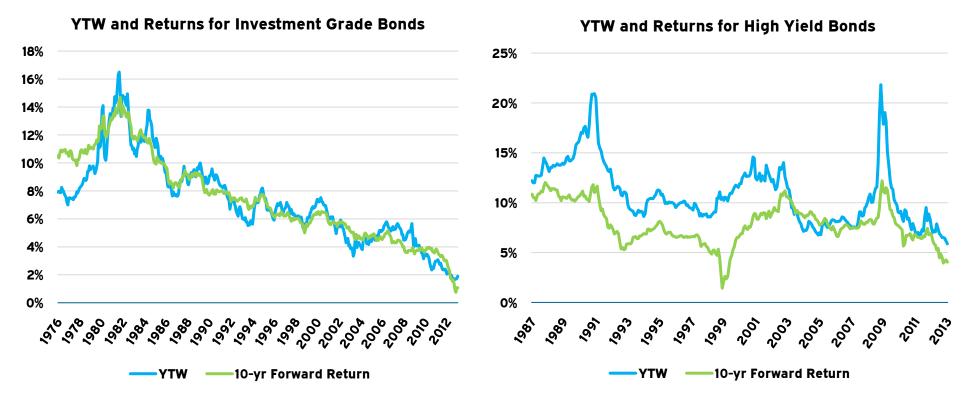

¹ Source: Bloomberg. Data is as of December 31, 2022.

Asset Allocation Analysis

Higher Yields Means Higher Future Returns

→ This increase in interest rates matters because yields are a very good predictor of future returns for bonds,¹ at least over a 10-year horizon.

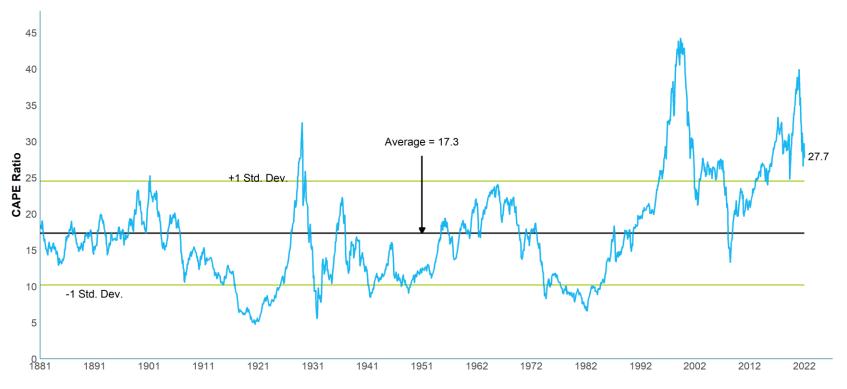

¹ When predicting returns for bonds, default risk should also be taken into account. For example, defaults are why the return for high yield bonds have generally been below the starting yield. Source: Bloomberg Aggregate and Bloomberg High yield indices. Data is as of December 31, 2022.

Asset Allocation Analysis

Lower Prices for Equities

- \rightarrow US stocks had a rough year, with the S&P 500 index experiencing an 18.1% loss.
- → Valuations remain elevated relative to their long-term history but are much nearer their average for the past 30 years.

US Equity Cyclically Adjusted P/E¹

¹ Source: Robert Shiller, Yale University, and Meketa Investment Group. Data is as of December 31, 2022 for the on S&P 500 Index.

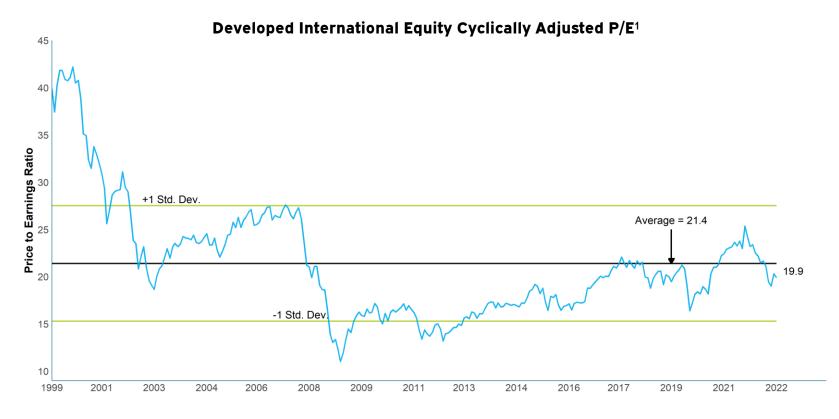

Asset Allocation Analysis

Lower Prices in Non-US Equities, too

 \rightarrow EAFE equities declined 14.5% in USD terms in 2022, though the loss was only 7.0% in local currency.

 \rightarrow EAFE valuations are now relatively close to their historical average.

¹ Source: MSCI and Bloomberg. Earnings figures represent the average of monthly "as reported" earnings over the previous ten years. Data is as of December 31, 2022.

Asset Allocation Analysis

And Lower Prices in Emerging Market Equities

- → Driven by a substantial downturn in Chinese equities (-21.9%), emerging market equities finished the year down 20.1%.
- \rightarrow As a result, valuations are well below their long-term average.

Emerging Market Equity Cyclically Adjusted P/E¹

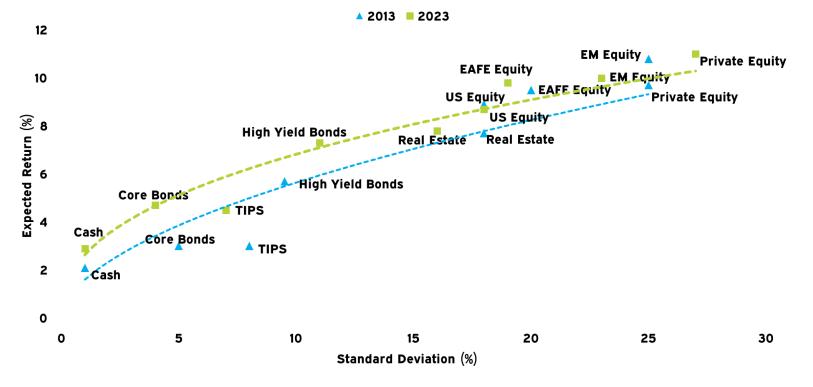

¹ Source: MSCI and Bloomberg. Earnings figures represent the average of monthly "as reported" earnings over the previous ten years.. Data is as of December 31, 2022.

Asset Allocation Analysis

The Big Picture: Higher Return for the ~Same Risk¹

- \rightarrow The relationship between long-term return expectations and the level of risk accepted is not static.
- → We anticipate many investors can take on less risk than they have over the past decade if they want to achieve their target returns.

¹ Expected return and standard deviation are based upon Meketa Investment Group's 2013 and 2023 20-year capital market expectations.

Asset Allocation Analysis

Mean Variance Optimization ("MVO")

- \rightarrow MVO is the traditional starting point for determining asset allocation.
- \rightarrow MVO mathematically determines an "efficient frontier" of policy portfolios with the highest risk-adjusted returns.
- \rightarrow All asset classes exhibit only three characteristics, which serve as inputs to the model:
 - Expected return
 - Expected volatility
 - Expected covariance with all other assets
- \rightarrow The model assumes:
 - Normal return distribution
 - Stable volatility and covariances over time
 - Returns are not serially correlated
- \rightarrow The MVO model tends to underestimate the risks of large negative events.

Verus Standard Deviation	12.1	12.1	11.9	10.4
	12.1	12.1	11.9	10.4

Asset Allocation Policy Comparison¹

¹ Expected return and standard deviation are based upon Meketa Investment Group's 2023 Annual Asset Study. Throughout this document, returns for periods longer than one year are annualized. ² Growth includes all asset classes listed under "Growth" except emerging markets bonds and high yield bonds, plus core real estate.

Asset Allocation Analysis

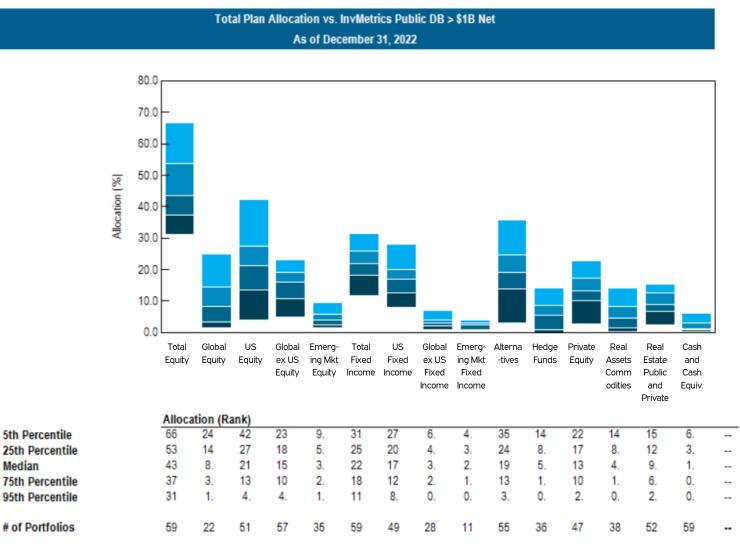

Review of Proposed Asset Allocation Policies

- \rightarrow San Jose Staff and Meketa Investment Group discussed several alternative policies.
- \rightarrow We show the following allocations:
 - The Federated Current Policy
 - Then we show two alternative options:
 - Mix A shifts some US Equity to outside the US (Developed Market Equity non-US).
 - Mix B shifts the same amount of US Equity to outside the US as Mix A, and also shifts 1% of assets from Venture Capital to Absolute Return (hedge funds).
 - Lastly, we show a 60% global equity/40% global investment grade bond allocation, for comparison purposes.

Asset Allocation Analysis

Asset Allocation Analysis

Stress Testing: Impact of Positive Market Movements (Expected Return under Stressed Conditions)¹

Scenario	Current Fed Mix (%)	Mix A (%)	Mix B (%)	60/40 (%)
10-year Treasury Bond rates drop 100 bps	2.0	1.9	1.9	2.2
10-year Treasury Bond rates drop 200 bps	10.9	11.0	11.0	12.8
Baa Spreads narrow by 30bps, High Yield by 100 bps	7.9	7.9	7.8	6.3
Baa Spreads narrow by 100bps, High Yield by 300 bps	14.2	14.2	14.3	13.3
Trade Weighted Dollar drops 10%	8.4	8.6	8.6	7.8
Trade Weighted Dollar drops 20%	23.4	24.1	24.1	25.3
US Equities rise 10%	7.4	7.3	7.2	5.9
US Equities rise 30%	17.8	17.4	17.4	16.9

¹ Assumes that assets not directly exposed to the factor are affected nonetheless. See the Appendix for further details.

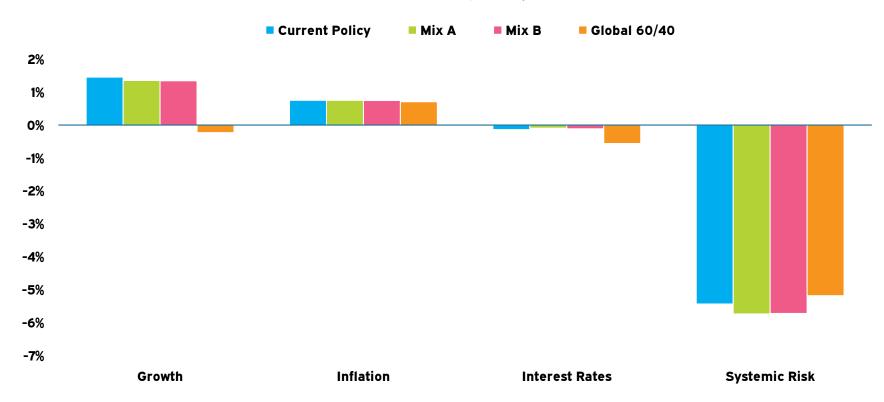

Asset Allocation Analysis

Economic Regime Management®

- → The Economic Regime Management[®] ("ERM") approach focuses on understanding the dynamics of the most important macro level forces that drive returns across asset classes.
- \rightarrow We find the most important factors to be:
 - Interest Rate Surprise Unexpected changes in the 10 year interest rate (related to Duration).
 - Inflation Surprise Unexpected changes in the CPI growth rate.
 - Growth Surprise Unexpected changes in the Real GDP growth rate.
 - Systemic Risk "System-wide" risk that propagates through all asset classes (e.g., 2008).
- \rightarrow We focus on surprises because expectations matter.
 - What was considered "low" inflation in the 1970s would be considered "high" today.
- \rightarrow These factors explain the majority of volatility across asset classes.
- \rightarrow Understanding these dynamics explain the "why" not just the "what."

Asset Allocation Analysis

Portfolio Sensitivity Comparison

- \rightarrow The chart above shows the resulting change in portfolio return given a one standard deviation event in the respective risk factor.
- → There is more concentration in Growth and Systematic Risk because these sources of risk tend to pay better (have higher expected returns) than the other risk factors.

Asset Allocation Analysis

Summary

- → Meketa Investment Group believes that the current System allocation, adopted in early 2020 and confirmed in early 2021 and early 2022, remains reasonable. The Investment Committee could also consider the other mixes presented.
- → If a new asset allocation mix is selected for the Retirement System, we recommend that Investment Committee also consider an updated asset allocation for the Health Care Trust, to make sure that the overall strategy of the two plans remains aligned.
- \rightarrow We also look forward to discussing this analysis with the members of the Investment Committee.

Appendix

Appendix

Appendix

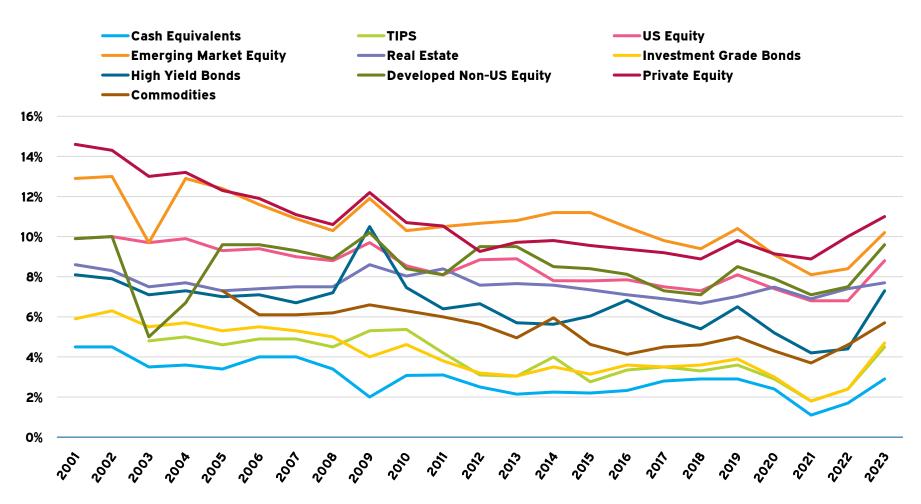

Notes and Disclaimers

- ¹ The returns shown in the Policy Options and Risk Analysis sections rely on estimates of expected return, standard deviation, and correlation developed by Meketa Investment Group. To the extent that actual return patterns to the asset classes differ from our expectations, the results in the table will be incorrect. However, our inputs represent our best unbiased estimates of these simple parameters.
- ² The returns shown in the Policy Options and Risk Analysis sections use a lognormal distribution, which may or may not be an accurate representation of each asset classes' future return distribution. To the extent that it is not accurate in whole or in part, the probabilities listed in the table will be incorrect. As an example, if some asset classes' actual distributions are even more right-skewed than the lognormal distribution (i.e., more frequent low returns and less frequent high returns), then the probability of the portfolio hitting a given annual return will be lower than that stated in the table.
- ³ The standard deviation bars in the chart in the Risk Analysis section do not indicate the likelihood of a 1, 2, or 3 standard deviation event—they simply indicate the return we expect if such an event occurs. Since the likelihood of such an event is the same across allocations regardless of the underlying distribution, a relative comparison across policy choices remains valid.

Stress Test Return Assumptions - Sample Inputs¹

¹ Assumptions are based on performance for each asset class during historical periods that resembled these situations.

Appendix

Meketa Investment Group 2023 Annual Asset Study Twenty-Year Annualized Return and Volatility Expectations for Major Asset Classes

Asset Class	20-year Expected Return (%)	Standard Deviation (%)
Cash Equivalents	2.9	1.0
Investment Grade Bonds	4.7	4.0
Long-term Government Bonds	5.0	12.0
TIPS	4.5	7.0
High Yield Bonds	7.3	11.0
Bank Loans	7.0	10.0
Emerging Market Debt (local)	6.0	12.0
Private Debt	9.0	15.0
US Equity	8.7	18.0
Developed Non-US Equity	9.8	19.0
Emerging Non-US Equity	10.0	23.0
Global Equity	9.2	18.0
Private Equity	11.0	27.0
Real Estate	7.8	16.0
Infrastructure	8.3	15.0
Commodities	5.7	17.0
Hedge Funds	6.1	7.0
Inflation	2.6	3.0

WE HAVE PREPARED THIS REPORT (THIS "REPORT") FOR THE SOLE BENEFIT OF THE INTENDED RECIPIENT (THE "RECIPIENT").

SIGNIFICANT EVENTS MAY OCCUR (OR HAVE OCCURRED) AFTER THE DATE OF THIS REPORT AND THAT IT IS NOT OUR FUNCTION OR RESPONSIBILITY TO UPDATE THIS REPORT. ANY OPINIONS OR RECOMMENDATIONS PRESENTED HEREIN REPRESENT OUR GOOD FAITH VIEWS AS OF THE DATE OF THIS REPORT AND ARE SUBJECT TO CHANGE AT ANY TIME. ALL INVESTMENTS INVOLVE RISK. THERE CAN BE NO GUARANTEE THAT THE STRATEGIES, TACTICS, AND METHODS DISCUSSED HERE WILL BE SUCCESSFUL.

INFORMATION USED TO PREPARE THIS REPORT WAS OBTAINED FROM INVESTMENT MANAGERS, CUSTODIANS, AND OTHER EXTERNAL SOURCES. WHILE WE HAVE EXERCISED REASONABLE CARE IN PREPARING THIS REPORT, WE CANNOT GUARANTEE THE ACCURACY OF ALL SOURCE INFORMATION CONTAINED HEREIN.

CERTAIN INFORMATION CONTAINED IN THIS REPORT MAY CONSTITUTE "FORWARD - LOOKING STATEMENTS," WHICH CAN BE IDENTIFIED BY THE USE OF TERMINOLOGY SUCH AS "MAY," "WILL," "SHOULD," "EXPECT," "AIM", "ANTICIPATE," "TARGET," "PROJECT," "ESTIMATE," "INTEND," "CONTINUE" OR "BELIEVE," OR THE NEGATIVES THEREOF OR OTHER VARIATIONS THEREON OR COMPARABLE TERMINOLOGY. ANY FORWARD-LOOKING STATEMENTS, FORECASTS, PROJECTIONS, VALUATIONS, OR RESULTS IN THIS PRESENTATION ARE BASED UPON CURRENT ASSUMPTIONS. CHANGES TO ANY ASSUMPTIONS MAY HAVE A MATERIAL IMPACT ON FORWARD - LOOKING STATEMENTS, FORECASTS, PROJECTIONS, VALUATIONS, VALUATIONS, OR RESULTS IN THIS PRESENTATION ARE BASED UPON CURRENT, PROJECTIONS, VALUATIONS, OR RESULTS. ACTUAL RESULTS MAY THEREFORE BE MATERIALLY DIFFERENT FROM ANY FORECASTS, PROJECTIONS, VALUATIONS, OR RESULTS IN THIS PRESENTATION.

PERFORMANCE DATA CONTAINED HEREIN REPRESENT PAST PERFORMANCE. PAST PERFORMANCE IS NO GUARANTEE OF FUTURE RESULTS.
